From the Director

This Annual Report summarizes the research activities of the Institute in 2010, as well as the teaching activities in the academic year 2009/2010. The activities of the Institute in the field of electronics and computer engineering are concentrated in the area of broadly defined microelectronics, optoelectronics and photonics. These include VLSI systems, microelectronic and nanoelectronic semiconductor devices, hybrid circuits (e.g. microwave, optoelectronic), sensors, microsystems, laser optoelectronics, electronic imaging and image processing. It is worth to emphasize that research activities of the Institute span modelling, CAD, manufacturing and diagnostics.

The Institute of Microelectronics & Optoelectronics (IMiO) was founded in 1970. It evolved from the Chair of Radio Engineering established by Professor Janusz Groszkowski in 1929. Our Institute is linked with the beginnings of the Faculty of Electronics and Information Technology through the person of Prof. Groszkowski, who worked in IMiO until his death, as well as the territory – half of the Institute is situated in the Building of Radio Engineering on the Warsaw University of Technology campus. Here the Institute's Technology Centre is located. It includes laboratories of silicon processing (clean-room), hybrid technologies and assembly techniques, fibre optic and integrated optoelectronic device fabrication, laser optoelectronics, characterization of new electronic and photonic materials and manufacturing processes. These laboratories developed their activities based on research projects financed by Polish government as well as those within 6th and 7th UE Framework Programme. The institute is a beneficiary of two large investment projects of the Innovative Economy Operational Programme. As a result a 9 high-tech laboratories offering high quality scientific services in the field of advanced electronic and photonic technologies will be established in IMiO.

In the field of teaching (three-level structure – B.Sc., M.Sc. and Ph.D. studies) the Institute continued to improve its contribution in the Electronics and Computer Engineering area (led together with the Institute of Electronic Systems) for on-campus studies. The involvement of the Institute in distance learning studies of Electronics and Telecommunications is also worth mentioning, especially post-diploma studies in the domain of tools and techniques of virtual education that began in 2004. Since 2009 IMiO provides a teaching program for the students of the Faculty of Management with the aim of educating future managers of electronic equipment production.

IMiO inspired and was actively involved in the organization of a series of popular-science lectures aimed to encourage secondary-school students to continue their education at our Faculty. The Institute aims for its teaching activities to meet the challenge of the development of modern technology and information society.

I express my sincere appreciation to all colleagues for your achievements which determined the position of our Institute in the Faculty of Electronics and Information Technology. Thank you very much for your cooperation in the creative development of the Institute.

Warsaw, January 2011

1. GENERAL INFORMATION

1.1. Organisation of the Institute and Areas of its Activities

The Institute of Microelectronics and Optoelectronics is a part of the Faculty of Electronics and Information Technology - the largest Faculty of the Warsaw University of Technology.

Our Institute consists of five divisions:

- Microelectronics and Nanoelectronics Devices Division;
- VLSI Engineering and Design Automation Division;
- Image and Microwave Photonics Division;
- Microsystem and Electronic Material Technology Division;
- Optoelectronics Division.

During the past thirty-three years of research in the area of microelectronics and optoelectronics the Institute has built its competence in:

- modelling of physical effects in modern semiconductor devices;
- silicon processing and its modelling, non-standard dielectric layer deposition techniques;
- developing methods and measurement systems to characterize electronic materials and devices;
- generation of microwaves, microwave measurement techniques, and numerical methods for electromagnetism;
- processing, designing, optimisation techniques and development of VLSI (very large scale integration of circuits) computer-aided tools;
- design and technology of thick-film hybrid circuits, fabrication of thick-film microsystems;
- modelling and design of sensors and optical-waveguide microsystems;
- laser physics (Fabry-Perot and distributed feedback lasers), laser spectroscopy of solid state active materials, and applications of lasers in medicine, manufacturing and telecommunications;
- fabrication and characterisation of optoelectronics elements and devices including fibre sensors, photovoltaics;

1.2. Board of Directors

Director of the Institute

- silicon carbide processing for high-temperature, high-power and high-frequency electronics
- computer-aided design of photo electronic image devices, image processing and visualisation of results of experiments with image devices;
- vacuum science and technology - computer-aided design of vacuum systems, modelling of the gas flow in vacuum systems, studies of gas parameter distribution in calibration chambers (vacuum metrology).

The research activities are supported by projects financed by the State Committee for Scientific Research and those within 7th UE Framework Programme, IDESA, NANOSIL.

The results of our scientific activities were published in many papers submitted to prestigious international scientific journals and presented at national and mostly at international conferences in the form of communications as well as the invited lectures.

The research carried out in the Microelectronics and Nanoelectronics Devices Division falls into three main areas, namely: technology, diagnostics and modelling of semiconductor structures, as well as applications of microelectronics in digital signal processing.

To name a few examples of its research topics:

- Diagnostics and characterisation of properties of single and double insulating layers (gate stack including ultra thin oxide layers) by means of electrical measurements analysis;
- Wear-out and degradation processes in MOS structures (breakdown of dielectrics layers, hot carriers effects, radiation damage effects);
- Transport mechanism and quantum effects in MOS structures (transistor, tunnel diode) with ultra thin oxide;
- New materials (semiconductors and dielectrics) for microelectronics applications (e.g.: silicon carbide, gallium nitride, silicon-germanium, germanium)
- Theoretical studies on MOS-SOI (silicon-on-insulator) and Si:Ge (silicon-germanium) MOS structure physics (modelling of devices behaviour and modelling for characterisation and diagnostics);
- Nanoelectronic phenomena and devices (e.g. tunnel and resonance tunnel diodes and transistors, Coulomb blockade diode, single-electron transistors, memories);
- PECVD deposition of ultra thin dielectric layers for MOSFET gate dielectric (SiO_2 , Si_3N_4 , SiO_xN_y);
- Ultra shallow implantation from r.f. plasma;
- Very low temperature processing of test structure;
- Fabrication of ultrathin amorphous silicon layers by PECVD
- Fabrication of double barrier structures and devices;
- MEMS/MOEMS processing;
- Silicon photonic devices fabrication.

The research carried out in the division falls into several main areas: development of IC design methodologies and tools, design of digital and analog integrated circuits for nonstandard demanding applications, investigations of new devices and circuits for future generations of microelectronic systems.

Current research projects in the Division include:

- methodologies of integrated circuit design for manufacturability: application of statistical process and device simulation in IC design, investigations of spatial on-chip correlation of random process disturbances, analysis of layout sensitivity to spot defects,
- development of CAD tools for integrated circuit design and verification, with special emphasis on analog full custom ASICs design,
- design of digital and mixed VLSI circuits for special applications such as innovative AD converters, data

processing in physical experiments, RF front ends for wireless data transmission etc.,

- modeling and control of leakage currents in nanometer CMOS digital circuits,
- Investigations of new VESTIC microelectronic technology.

The main areas of activity of the Division are education and research, both in the field of the technology of electronic imaging devices, digital image processing, propagative electronics and microwave photonics. Members

of the academic staff are involved in research and development works on:

- theoretical principles of image modelling, processing and analysis;
- application of image processing methods for diagnostic control and measurement systems in industry, medicine, research and commerce;
- image acquisition in polarization imaging systems and optical image processing;
- 3D Vision methods and algorithms;
- electro optic effects in liquid crystals and their applications to LCD and photo refractive phenomena in liquid crystals;
- an analysis of the oscillation conditions, frequency stabilisation and synthesis in microwave bands;
- measurement techniques of microwave circuits and devices parameters with emphasis on automation and computerisation of measurement methods;
- modelling and computer aided design of microwave devices and circuits;
- controlling of microwave circuits parameters by means of optical signals;
- investigations and modelling of optical-microwave frequency conversion processes;
- modelling of optically controlled microwave devices, as photodiodes, photo-varactors, phototransistors;
- modelling of optoelectronic and microwave devices for data transmission networks.

The research activity of the Division concentrates on optoelectronic and hybrid devices. Fundamental and applied research are carried out. Research groups are organised for defined tasks.

The main research areas are as follows:

- fabrication and investigation of the following optoelectronic devices: integrated passive and active light

wave guiding structures (modulators, bistable switches etc.) and fibre optic sensors;

- computer engineering for fibre optics;
- new techniques of surface mounted devices on PCB (printed circuit boards);
- application of thin and thick film technology in hybrid devices and thick film sensors fabrication;
- investigation of the electronic structure, stability and optical properties of amorphous silicon and its devices (thin film transistors, solar cells, etc.);
- research, design and monitoring of photovoltaic systems, strategy for development of photovoltaic solar energy;
- electronic packaging technology;
- plasma deposition of nanocrystalline diamond (NCD), diamond-like carbon (DLC) thin films and their application in fibre optic and waveguide sensing structures.

The activity of the Optoelectronics Division is concentrated on education as well as on various areas of optoelectronic research in the field of laser physics, laser spectroscopy, laser construction and laser applications in medicine and air pollution monitoring.

Photovoltaics laboratory, as a part of the Division, serves as a focal point for conducting and stimulating research and demonstration activities; educating students; organizing technical meetings, workshops, symposia, and conferences; disseminating information; and addressing environmental issues.

The academic staff of the Division gives lectures in photonics, laser physics, laser technology, laser applications, laser spectroscopy, integrated optoelectronics and optical computing, all of which are accompanied by appropriate laboratory class activities.

The main research activity of the Division comprises:

- solid state laser construction and their applications in materials processing;
- spectroscopic research of new laser materials, investigation of the excitation processes in rare earth doped dielectric materials, research of blue up-conversion laser structures, waveguide lasers;
- theoretical research of laser generation in planar, fibre and hollow waveguide gas lasers, analysis of light generation in DFB (distributed feedback) structures, photonic crystals structures and in lasers with non-linear optical elements, investigation of the statistical properties of the light generated in various laser structures;
- nano-optical structures and photonic band-gap materials;
- research of light generation in metal vapour gas lasers, measurement of laser parameters, investigation of light generation in hollow cathode lasers, analysis of plasma discharge processes, research of the opto-galvanic effect;
- optimisation of the construction of ion gas lasers, investigation of the processes in discharge tube ceramic ion laser and laser operation in various cavity geometry, investigation of light generation in ion gas lasers for medical applications;
- spectroscopic and theoretical research of light generation in silicon photonic lasers.

4. RESEARCH PROJECTS

Project definitions and descriptions - prepared by Project Leaders.

4.1. Projects Granted by the University

- [Pro1] **The Development of Design, Processing and Testing Methods of the Electronic Devices and Materials for Microelectronics and Optoelectronics** (Rozwój metod wytwarzania i badania materiałów oraz modelowania i charakteryzacji przyrządów w dziedzinie mikroelektroniki i optoelektroniki), project leader: Paweł Szczepański, June 2009 - March 2010, **sub-projects:**

- [Pro1.1] **Analysis, modeling and investigation of waveguide structures for amplifiers and lasers and characterization of optically active materials,** (Analiza, modelowanie i badanie światłowodowych struktur wzmacniających i laserowych oraz charakteryzacja materiałów optycznie aktywnych), sub-project leader: Michał Malinowski, co-workers: P.Szczepański, R.Piramidowicz

Waveguide, active structures based on rare-earth doped fibers, planar structures, microdisk and photonic bandgap materials offer an attractive technology for micro-size amplifiers and lasers. One of the recent important developments is the successful operation of fiber lasers, which offer the highest efficiencies and the best thermal working conditions among solid-state lasers. Fiber lasers not only could be easily coupled to optical telecommunication fiber components, but also give output powers exceeding kW cw range. In this work we present a general modeling of rare-earth doped fiber and planar lasers, including up-conversion lasers. Approximate analytical results are derived for the threshold and the output intensities. Experimental work is oriented on the investigation of fiber lasers based on Pr, Ho and Nd ZBLAN glass, and epitaxial,planar crystalline RE:YAG/YAG structures.

- [Pro1.2] **Characterization of construction and materials used for microsystems sensors technology** (Chrakateryzacja konstrukcji i materiałów dla mikrosystemowych technik senorowych), sub-project leader: Jan Szmidt

This work bases on a review, of the published literature and on the authors' own research, of the current state of the art of fiber-optic capillary sensors and related instrumentation as well as their applications, with special emphasis on point-of-care chemical and biochemical sensors.

In the first part of our work we systematize the various types of sensors from the point of view of the principles of their construction and operation. In the second part we look at microsystems sensors technology that uses multi-parametric and multi-functional optical capillary component. Unlike classical fiber-optic sensors which rely on changes in light propagation inside the fiber as affected by outside conditions, optical capillary sensors rely on changes of light transmission in capillaries filled with the analyzed liquid, which opens the possibility of interesting new applications, while raising specific issues relating to the construction, materials and instrumentation of those sensors.

- [Pro1.3] **Effects of silicon gate region modification with fluorine on the properties of MOS devices** (Wpływ modyfikacji powierzchni krzemu w obszarze bramki fluorem na właściwości struktur MOS), sub-project leader: Romuald Beck

The project aims in experimental study of the consequences of exposure of silicon surface to r.f. fluorine containing plasma. The nature of the surface modification is complex and is of both, physical and chemical nature. From the physical point of view, one can expect ultra-shallow fluorine ions implantation, as well as substrate structure damage. From the chemical point of view, one can expect also formation of silicon-fluorine bonds and particles. In this work we will attempt to characterize the effects and find out the possibility to control them by plasma process parameters.

- [Pro1.4] **Liquid crystal cells in GHz range and structural analysis of 3D objects** (Ciekłokrystaliczne przetworniki w zakresie GHz i analiza struktur obiektów 3D), sub-project leader: Janusz Parka

Liquid crystals physical properties in the GHz range are strongly investigated last years. Low loss nematic liquid crystals materials with high dielectric properties and in optical range in tunable GHz phase shifter construction were used. Theoretical problems of wave propagations in such type of phase shifter was discussed. Application properties and possibility of improving parameters of this device and tunability problems in 10 - 30 GHz are considered.

- [Pro1.5] **Research on the physical models applied for device simulation in submicrometer IC technologies,** (Badania modeli fizycznych dla symulacji elementów układów scalonych w technologiach submikrometrycznych), sub-project leader: Andrzej Pfitzner, co-workers: J.Gempel, G.Janczyk, Z.Jaworski, S.Jeszka, D.Kasprowicz, W.Kuźmicz, E.Piwowska, A.Pfitzner, W.Pleskacz, A.Wielgus, A.Wojtasik

Scaling of semiconductor devices comes to the applicability limit of macroscopic models of the physical phenomena occurring in the active regions of IC devices. Research cover simulation experiments comparing DC characteristics of the chosen nanometric devices, obtained using drift-diffusion, thermodynamic and hydrodynamic models, and exploration of such devices parameter space.

[Pro2] **The Development of Design, Processing and Testing Methods of the Electronic Devices and Materials for Microelectronics and Optoelectronics** (Rozwój metod wytwórzania i badania materiałów oraz modelowania i charakteryzacji przyrządów w dziedzinie mikroelektroniki i optoelektroniki), project leader: Paweł Szczepański, June 2010 - March 2011, **sub-projects:**

[Pro2.1] **Application of ultra-shallow fluorine implantation to increasing MOS structures radiation damage hardness against high energy electrons (1MeV)** (Zastosowanie ultra-płytkiej implantacji fluoru do podniesienia odporności struktur MOS na radiację wysoko energetycznymi (1MeV) elektronami), project leader: Romuald B. Beck

The project aims in experimental study of the consequences of exposure of silicon surface to r.f. fluorine containing plasma. Such process has been proved to allow for ultra-shallow implantation of fluorine, under certain circumstances achieving concentrations of the order of 10^{19} cm^{-3} . It has been found that presence of fluorine in the gate stack region reduces significantly the degradation due to high energy (1MeV) electrons irradiation. The ultimate goal is finding correlations between irradiation effects and concentration and position of the fluorine profile.

[Pro2.2] **Constructions and materials analysis for microsystems sensing** (Analiza konstrukcji i materiałów dla mikrosystemowych technik sensorowych), project leader: Jan Szmidt

This grant considers research, of the current state of the art of fiber-optic capillary sensors and related instrumentation as well as their applications, with special emphasis on point-of-care chemical and biochemical sensors, systematizing the various types of sensors from the point of view of the principles of their construction and operation. Unlike classical fiber-optic sensors which rely on changes in light propagation inside the fiber as affected by outside conditions, optical capillary sensors rely on changes of light transmission in capillaries filled with the analyzed liquid, which opens the possibility of interesting new applications, while raising specific issues relating to the construction, materials and instrumentation of those sensors. We examine polymer-ceramic composites materials for their dielectric, mechanical, and thermal properties as well as low loss dielectric samples covered with thin metal patterns consisting split-ring resonators SRRs, creating a regular hexagonal lattice. In order to determine the two complex quantities, namely the effective permittivity and the effective permeability of materials samples have been tested using the split post dielectric resonator (SPDR) method.

[Pro2.3] **Development of CAD tools for multiprocessor and distributed computing environments** (Rozwój oprogramowania CAD pracującego w trybie wieloprocesorowym i rozproszonym), project leader: Wiesław Kuźmicz

The goal of the project is to develop new versions of CAD tools (from the IMiOCAD toolset for integrated circuit design and verification), which would take advantage of the computing power of two computer clusters existing in the VLSI engineering group. The works will include such topics as:

- parallelization of the algorithms,
- optimal task assignment,
- synchronization of tasks and processes,
- synchronization of communication between computers in the cluster,
- assessment of the efficiency of various synchronization strategies.

The final outcome expected are versions of the CAD software that will run in the mutitaksing, multiprocessor and distributed computing environments.

[Pro2.4] **Experimental study of the use of photonic technology in microwave oscillator circuits and the analysis of 3D structures using liquid crystal polarizing filter** (Wykorzystanie technik fotonicznych w układach oscylatorów mikrofalowych oraz analiza struktur 3D za pomocą filtra ciekłokrystalicznego), project leader: Janusz Parka

The project aims in experimental study of the use of photonic technology in microwave oscillator circuits and the analysis of 3D structures using liquid crystal polarizing filter. Research will be carried out on the use of photonic technology in microwave oscillator circuits. Application properties and possibility of improving parameters of this type device are considered. Development of 3D data acquisition methods for structures with strong polarization and analysis in order to detect defects and identify structure.

[Pro2.5] **Modeling and investigation of microphotonic structures and characterization of optically active materials** (Modelowanie, opracowanie i badanie mikro-struktur fotonicznych oraz charakteryzacja ośrodków optycznie aktywnych), project leader: Michał Malinowski

The project is focused on; optical modeling tools for passive and active micro-photonic devices such as; planar and fiber waveguides, amplifiers and lasers, optical modeling tools for nonlinear optical high-finesse (ring, DFB/DBR, photonic crystal) resonators, power optimization and quantum noise analysis of amplifiers and lasers, laser action studies in new solid-state lasers, including waveguide and photonic crystal structures.

The program includes spectroscopic investigations of rare-earth activated solids for technological and biological applications. This concerns bulk monocrystalline, nanocrystalline and glassy matrix for various phosphors, including white light and up-conversion phosphors, sensors, photovoltaics, lasers and amplifiers.

[Pro2.6] **Spectral conversion for solar cells using lanthanide ions** (Konwersja widma słonecznego w systemach fotowoltaicznych z wykorzystaniem jonów ziem rzadkich), project leader: Michał Malinowski

One of the approaches to increase the solar cell efficiency is to change the solar spectrum via spectral up- or down-conversion. In up-conversion two infrared photons that would otherwise be transmitted through the cell are added up to one visible photon, that can be absorbed by the solar cell. Down-conversion is the reverse process when one high energy

photon is cut into two infrared photons, or down-shifted in energy, that still can be absorbed by the solar cell. It has been shown theoretically that for ideal up-and down-conversion materials, a maximum efficiency of about 50% and 40% can be achieved, respectively. The project includes spectroscopic investigations of rare-earth activated nano-crystalline solids embedded in glassy or plastic matrix. Multi-ion and multi-photon processes in selected systems such as Er, Tm, Ho, Dy, Tb and Yb doped YO, YAG and YAM nano-powders have been studied.

- [Pro3] **Building of quadcopter controlled by wireless accelerometer manipulator**, (Budowa pojazdu latającego „quadcopter” sterowanego za pomocą bezprzewodowego manipulatora akcelerometrycznego), project leader: Zbigniew Pióro, March 2010- December 2010

The aim of this project was construction of a flying vehicle powered by four, independent rotors located symmetrically in reference to its gravity centre. Basic parameters of the Quadcopter: breadth – 0,6 to 0,7 meters, weight 1kg, 4 brushless engines of thrust 600g each, powered by 11,1V litho-polymer batteries allowing for 30 minutes flight without a load, equipped with inert sensors module allowing implementation of autopilot algorithms, possible implementation of accelerometer manipulator equipped with 2,4GHz wireless communication system.

- [Pro4] **Development of software for automation of an current-voltage (I-V) measurements** (Opracowanie programu do automatyzacji pomiarów prądowo-napięciowych (I-V)), project leader: Jan Szmidt, March 2010- December 2010

The aim of this project was full automation of an existing current-voltage (I-V) measurements setup for characterization of microelectronics devices, including MIS capacitors, MIS transistors, Schottky diodes, as well as preparation of a user-friendly software for the setup. The software is capable for controlling of the I-V measurements, data storage, as well as analysis and visualization of the obtained results.

- [Pro5] **Fiber amplifier dedicated to application in optical access systems** (Wzmacniacz światłowodowy do zastosowań w sieciach dostępowych), project leader: Ryszard Piramidowicz, co-workers: Krzysztof Anders, Anna Jusza, Paweł Gdula, Katarzyna Ławniczuk, Katrin Welikow, Piotr Florczyk, Łukasz Sudół, Michał Śpiczko, March 2010 - December 2010

Project was aimed at design, development and characterization of a low-cost, compact erbium doped optical fiber amplifier operating in the C band and dedicated to application in optical access systems. The project's tasks covered detailed analysis of spectroscopic properties of erbium doped preforms and fibers, theoretical modeling of main parameters, design of amplifier components, and, finally, manufacturing and characterization of the EDFA demonstrator. A number of technical problems have been solved, which resulted in development of compact and robust, all-fiber design suitable both for access and CATV systems as well as for student laboratories.

- [Pro6] **Modeling of feasibility of securing energy needs of buildings with use of photovoltaic systems and preparation for certification of their components** (Modelowanie możliwości zaspokojenia potrzeb energetycznych budynków przy pomocy systemów fotowoltaicznych oraz przygotowanie do certyfikacji ich komponentów), project leader: Michał Malinowski, co-workers: Maciej Juźwik, Piotr Knyps, Bartosz Fetliński, Ewa Piórecka, Jakub Wiśniewski, May 2010- December 2010

Within framework of the project some of the measurement equipment necessary to implement certification measurements in accordance with corresponding IEC norms of photovoltaic (PV) modules were acquired. It enabled implementation of measurement utilizing currently owned equipment according to international norms for PV modules certification. Guidance measurements of selected photovoltaic modules taken from buildings of WIS and GR were conducted and aging effects investigated. Results of these measurements served as input for analysis of performance of examined PV systems, especially for long term stability modeling, that also was conducted within the project. Performed analysis involved multiple aspects of PV system operation, however due to research profile of the Faculty of Environmental Engineering it mainly concerned feasibility of fulfilling energy needs of buildings with use of PV systems. Analysis made it possible to verify prepared model of variable in time energy needs in public buildings. This model made it possible to determine the possibility of decreasing peak energy needs during daytime.

4.2. Projects Granted by the Ministry of Education and Science

- [Pro7] **Contact and assembly technologies for high temperature, high power and high frequency applications of SiC devices**, (Technologia kontaktów i montażu dla przyrządów z węglika krzemu do zastosowań wysokotemperaturowych, wysokomocowych i wysokoczęstotliwościowych) Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Ryszard Kisiel, co-workers: Zbigniew Szczepański, Marek Guziewicz, Norbert Kwietniewski, Ryszard Biaduń, April 2007 - March 2010

The aim of the project is to elaborate the ohmic contact technology for SiC devices as well as assembly technique for electrical and mechanical connection between SiC structure and package. An elaborated package shall be able to work in high temperature (up to 400°C), high power and high frequency application.

- [Pro8] **Deposition and measurements of thin metal and dielectric films intended for nanoelectronics and microwave technique**, (Wytwarzanie i charakteryzacja cienkich warstw metalicznych i dielektrycznych dla potrzeb nanoelektroniki i techniki mikrofalowej), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Jerzy Krupka, co-workers: Jan Szmidt, Marek Guziewicz, Zdzisław Mączeński, Mikołaj Baszun, Norbert

Kwietniewski, April 2007 - April 2010

New nanotechnologies require not only high resolution photolithographic processes but also deposition of very thin (the order of few nanometers) metal and dielectric films having repeatable and electromagnetic properties. When film thickness becomes very thin their physical properties may be different than the properties of bulk materials or thin films having thickness in the range of microns. In the addition traditional measurements methods may be not adequate for very thin films characterization. The main goal of this project is deposition and characterization of extremely thin metal and dielectric films. Single post and split post dielectric resonator techniques will be used for measurements of the surface resistance of thin metal films deposited on low loss dielectric substrates. Al, Cu, Ag, Au, Fe, Mo, W, Pd, Pt and ITO films will be measured employing those resonators. For comparison DC and low frequency measurement techniques will be also employed.

- [Pro9] **Design and manufacturing of complete microwave sensor based measurement system intended for electromagnetic properties investigations of graphene,** (Opracowanie systemu z mikrofalową głowicą pomiarową w postaci rezonatora dielektrycznego do badań właściwości elektrycznych grafenu), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Jerzy Krupka, October 2010 – March 2013

The main goal of this project is to design and manufacture of complete apparatus for contactless sheet resistance and conductivity measurements of epitaxial graphene. The most important parts of the system are microwave sensors with dielectric resonators that allow measurements of graphene deposited on a small 10 mm x 10 mm semi-insulating silicon carbide substrates. Three different microwave heads will be constructed. In the addition automatic vector network analyser will be purchased which is intended for the resonance frequency and Q-factor measurement of microwave sensors. For each measurement head appropriate software based on numerical solutions of Maxwell's equations will be developed which is necessary for the determination of the electromagnetic material properties such as the sheet resistance from measurement data.

- [Pro10] **Electrical characterization of dielectric-semiconductor interface in advanced MOS structures,** (Elektryczna charakteryzacja powierzchni granicznej dielektryk-półprzewodnik w zaawansowanych strukturach MOS), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Lidia Łukasiak, October 2008 – March 2010

The aim of this project is to adapt the charge pumping method to advanced MOS structures, i.e. conditions of strong coupling between top and back interfaces and considerable leakage current.

- [Pro11] **Emission properties of the active hybrid eutectic materials** (Właściwości emisyjne aktywnych eutektyków hybrydowych), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Marcin Kaczkan, May 2010 – November 2011

The aim of the project is to investigate and analyze spectroscopic properties of optically active micro- and nano-materials. These type of structures are interesting as host materials, in which active ions may have different properties compared to those they have in bulk crystals. In particular, influence of the eutectic structure properties on the rare-earth ions behavior will be investigated. Emission properties of the Pr³⁺ and Er³⁺ active ions in SrTiO₃-TiO₂ oxide-oxide eutectic will be examined with the help of high-resolution laser spectroscopy. Additionally, the spectroscopic analysis for the bulk crystals with the same structures as constituents of eutectic will be perform. This analysis will enable determination of the influence of eutectic structure on the electron relaxation processes in the excited active ions.

Results of the project will enhance the knowledge about processes occurring in solid-state active media which have never been investigated in this manner.

- [Pro12] **Feasibility study of the novel nanometric silicon transistors and modelling of them for computer aided design of integrated circuits,** (Badania właściwości nanometrowych tranzystorów krzemowych o nowej konstrukcji i ich modelowanie dla potrzeb wspomagania projektowania (CAD) układów scalonych), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Andrzej Pfitzner , April 2010 – April 2012

The goal of this project is a feasibility study of the field-effect and bipolar transistors as the devices of novel technology: Vertical Slit Transistor based Integrated Circuits (VeSTICs), proposed by W. Maly. Original geometry of the devices of vertical nanometric active region and symmetrically placed vertical volume contacts allows to reach extremely regular layout of the circuit, better heat transfer, larger scale of integration and even real 3D integration. Project includes optimization of the devices design, especially of the new, twin gate junction-less transistor Vertical-Slit Field-Effect Transistor (VeSFET) with regard to chosen electrical parameters, and development of the analytical models destined to circuit simulation.

- [Pro13] **Ferroelectric smectic LC materials in holographic recordings,** (Ciekłokrystaliczne smektyczne materiały o właściwościach ferroelektrycznych do zapisów holograficznych), Military University of Technology, Faculty of Advanced Technologies and Chemistry, project leader: Janusz Parka, co-worker: Marek Sutkowski, October 2008 – October 2010

The goal of the project is to achieve holographic recordings in thin smectic ferroelectric liquid crystal layers. The optical recording of the gratings is performed with use of low-power coherent laser beams (with different wavelengths). Bistable SSFLC (Surfce Stabilised Ferroelectric Liquid Crystal) effect should be used to allow possibility of re-writable properties of the recordings.

- [Pro14] **Growth of the AlGaN/GaN/SiC-based semiconductor heterostructures by vapour phase epitaxy for the HEMTs applications,** (Wytwarzanie heterostruktur półprzewodnikowych AlGaN/GaN/SiC metodą epitakcji z fazy gazowej na potrzeby konstrukcji tranzystorów z dwuwymiarowym gazem elektronowym (HEMT)), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Jan Szmidt, April 2010 – February 2011

The growth conditions of GaN-on-SiC MetalOrganic Vapour Phase Epitaxy has been determined as well as AlN wetting layer growth conditions. Effect of growth pressure on coalescence thickness and crystal quality of GaN deposited on 4H-SiC has been investigated. HEMTs (AlGaN/AlN/GaN-based) heterostructure has been grown and characterized. The sample HEMTs epistructures are under processing of the devices.

- [Pro15] **High temperature spectroscopy of rare-earth doped crystals and nanocrystals for luminescence thermometry applications,** (Spektroskopia wysokotemperaturowa kryształów i nanokryształów tlenkowych domieszkowanych jonami ziem rzadkich dla zastosowań w termometrii luminescencyjnej) Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Michał Malinowski, August 2009 – February 2012

Phosphor thermometry is being used for non-contact measurements in difficult and hostile high temperature environments. In particular, temperature measurements inside various engines, jet turbines or similar devices are especially amenable to fluorescence techniques. Suitable phosphors could cover temperature ranges from -265 to 1600 °C. The aim of this work is to study the temperature dependence of the luminescence spectra and decays characteristics of rare-earth (Tb, Dy, Eu, ...) activated nanopowders and thin films of YAM, YAG and Y_2O_3 crystals. Also, the temperature dependence of the up-conversion emissions will be studied over a wide temperature range.

- [Pro16] **Investigation of coherent radiation sources for photonic integrated circuits made in SOI technology,** (Badania nad źródłami promieniowania koherentnego dla fotonicznych układów zintegrowanych wykonanych w technologii krzemowej), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Paweł Szczępański, co-workers: R.B.Beck, B.Majkusiak, M.Malinowski, R.Piramidowicz, A.Tyszka-Zawadzka, A.Mossakowska-Wyszyńska, J.Walczak, P.Warda, K.Leśniewska-Matys, M.Koba, October 2010 – October 2013

The aims of the project is to create original models, verified experimentally, describing the properties of radiation sources made in silicon technology and implemented for integrated circuits photonic, to prepare technologies for the implementation of test structures and their implementation, as well as an electrical and optical characterization of structures obtained to verify the theoretical models.

The research focuses on two fully monolithic solutions implemented entirely within the Group IV materials. The first one concerns the generation of Raman radiation in SOI waveguide structure (a "rib") with LED PIN. In this case, the work will involve the development of theoretical models of the radiation generation based on two complementary formalisms, first: the wave approach and the theory of coupled wave modes; second: the transition matrix formalism; for the DFB and DBR laser structures and the structures based on photonic crystals.

The second case relates to nano-electronic and photonic (NEF) silicon structures in which the generation of photons can be caused by the current flow through the pn junction. The structure of metal-SiO₂-well quantum-SiO₂-Si with the pn junction made on silicon substrate will be analyzed. It is also planned to produce nanocrystallines with various sizes in other types of layers, i.e. silicon nitride and oxide-silicon nitride in order to investigate the changes of the generated radiation wavelength. The resulting structure will be subjected to electrical characterization as well as will be performed the spectral measurements of emitted light. Characteristics obtained will be used for verification of theoretical models.

- [Pro17] **Light generation in planar waveguide lasers based on two dimensional photonic crystals** (Generacja promieniowania w falowodowych laserach planarnych wykonanych na bazie dwu-wymiarowych kryształów fotonicznych), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Paweł Szczępański, co-worker: Kamila Leśniewska-Matys, March 2009 – March 2011

The aim of the project is semi-analytical supermodes analysis of the structure comprising N-coupled planar waveguides manufactured on the base of two dimensional photonic crystal active material. Next, it is possible to create a model of nonlinear operation of such a phased array laser with Fabry-Perot cavity. The analysis is based on energy theorem approach which allows investigation of the influences of real structure parameters i.e. photonic crystal and waveguides geometry for output power level. In particular, the effect of radius of an air column, period of photonic crystal lattice in the horizontal direction (triangular and square symmetry), distance between waveguides, number of waveguides, thickness and length of active structure on output power level and maximal power efficiency is analyzed.

- [Pro18] **Modeling and characterization of multigate MOS SOI structures** (Modelowanie i charakteryzacja wielobramkowych struktur MOS SOI), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: A. Jakubowski, co-workers: B. Majkusiak, L. Łukasiak, R.B. Beck, J. Gibki, S. Szostak, J. Walczak, A. Zaręba, G. Głuszko, D. Tomaszewski, October 2007 – October 2010

The aim of the project is analysis of electrical characteristics of multi-gate MOS structures and development of methods of characterization, as well as modeling of selected physical phenomena present in multigate MOS devices and their parameters and electrical characteristics.

- [Pro19] **Modeling and characterization of semiconductor devices fabricated on silicon carbide cubic (3C-SiC) and hexagonal (4H-SiC) polytype substrates,** (Modelowanie i charakteryzacja przyrządów półprzewodnikowych wytworzonych na kubicznej (3C-SiC) oraz heksagonalnej (4H-SiC) odmianie węgliku krzemu), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Andrzej Jakubowski, October 2008 – February 2010

The aim of the project is to develop a set of accurate models of the fundamental parameters and devices (VDMOSFET, MOSFET, MESFET, MIS capacitor, gate diode) fabricated on 3C-SiC and 4H-SiC.

The models are verified by means of characterization of test structures manufactured by a foreign research partner - Acreo AB, Sweden.

Charge pumping is a novel method used for characterization of silicon carbide. Two-level and three-level charge pumping methods are adapted to studying the interface traps of the 3C-SiC and 4H-SiC VDMOSFETs.

- [Pro20] **Modeling and investigation of the double barrier metal-oxide-semiconductor tunnel structures,** (Modelowanie i badanie struktur tunelowych typu metal-izolator-półprzewodnik (MIS) z podwójną barierą potencjału), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Bogdan Majkusiak, co-workers: R.B. Beck, A. Jakubowski, L. Łukasiak, J. Walczak, R. Mroczynski, A. Zaręba, S. Szostak, A Mazurak, J. Grabowski, G. Głuszko, March 2010 – March 2013

The aim of the project is to develop and verify a theoretical model of the double barrier MOS tunnel diode as well to fabricate the test structures and investigate them by means of the theoretical model as a characterization tool.

- [Pro21] **Modeling of silicon structures with low-dimensional electron gas,** (Modelowanie struktur krzemowych z niskowymiarowym gazem elektronowym), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: J. Walczak, co-workers: B. Majkusiak, R.B. Beck, A. Mazurak, May 2007 – May 2010

The project relates to modeling Si and also SiGe structures with 2DEG (two dimensional electron gas – quantum plane) and 1DEG (quantum wire). The main goal is the development and implementation of physical models of complex structures comprising a plurality of ultrathin semiconductor and dielectric layers, along with the analysis of obtained electrical characteristics of the modeled devices.

- [Pro22] **Nanostructural carbonaceous films for cold emitters** NANOCAFE – MNT-ERA NET, (Zimne emiterы elektronów oparte o nanostrukturalne warstwy węglowe MNT-ERA NET), leading institution: Tele- and Radioresearch Institute, task executor: Warsaw University of Technology, Institute of Microelectronics, project leader: Elżbieta Czerwisz, task leader: Jan Szmidt, co-workers: Jerzy Kalenik, Piotr Firek, Mateusz Mroczkowski, Ryszard Biadań, Krystyna Szylko, Krystian Król, March 2009 – February 2011

The goal of the project is preparation of a new type of cold cathode based on nanocomposite material that is nanostructural carbonaceous film and design of prototype device based on the cathode.

This film consists of composite nanostructural material built of carbon nanotubes, carbonaceous and metal nanocrystals. The film based cold electron sources will be designed as a new type of cold electron emitters. Practical goal of this project design a prototype of a new cold cathode that shall be used in bright displays of new type.

- [Pro23] **New optoelectronics devices for intelligent classification of organic and biologic liquids.** (Nowe przyrządy optoelektroniczne do inteligentnej klasyfikacji cieczy organicznych i biologicznych), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Jan Szmidt, November 2010 – October 2013

We highlight the main differences between the liquid classification method proposed in grant and other known methods, pointing out that the proposed microliter photonic sensor setup with local heating and optical capillaries offers a new approach to liquid examination using the index of refraction, turbidity, surface tension, viscosity and vapor pressure as the determining parameters, which can be correlated with biological or chemical information. The novelty of the proposed approach to sensor devices lies in the use of time-domain data and neural network processing, which gives more information about the liquid in question than the traditional static sample examination approach. In the first part of grant, we investigate the operating principles and various aspects of the construction of the optical capillary head. We look at two different cases: (1) transparent liquids and (2) highly turbid liquids, the latter described as an emulsion of particles in a colloidal solution. We go on to examine the possibilities of using replaceable components as a practical means of realizing the systems. The second part of our work considers the principles of optoelectronic intensity signal detection, including the aspects of speed, accuracy and simplicity of the test instrument and ways of reducing the dependence of the sensor's sensitivity on ambient conditions. The principles of sensor operation will be described using two practical examples. The first involves recognition of liquids of different chemical origin containing alcohols and glycols and an examination of the composition of bio-fuels. The second example deals with a new method of mastitis classification using optical capillary sensors. In this context, we discuss the relationship of the physically measured test-cycle data and the proper choice of features for the artificial neural network classification algorithm that we use. We demonstrate that combined biological, chemical and physical analysis also leads to proper feature selection and sample classification.

- [Pro24] **Next generation teleinformatics service and nets – technology, application and market aspects. Development of technology and algorithms for telemedicine services using of Internet and cell telephone nets,** (Usługi i sieci teleinformatyczne następnej generacji – aspekty techniczne, aplikacyjne i rynkowe. Rozwój technik i algorytmów telemedycyny z wykorzystaniem Internetu oraz sieci telefonii komórkowej), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Mikołaj Baszun, January 2008 – December 2010

The aim of the project is development of technology and algorithms for services with using of Internet and cell telephone nets for telemedicine applications. The project obeys the following tasks:

- Working out of new algorithms for classifications and/or categorizations of the physician tasks aspected from a remote outdoor patient, for application in server expert systems.
- Design of server services using secure and authentified remote wireless communication of the physicians with the patients, based on uncertain data.

- Design and realizing of practical models of intelligent electronic modules for monitoric of the diagnostic data of an outdoor human beeing, without his engagement.
- Design of a specialized serwer databases for telemedicine applications, with communication history and secure access tools.
- Design data of new algorithms for clasifications and/or categorizations of a physician tasks aspected from a remote outdoor pacient.
- Software implementation of serwer services using secure and authentified remote wireless communication of physicians with patients.
- Practical models of intelligent electronic modules for monitoric of the diagnostic data of an outdoor human beeing.
- Software implementation of secure serwer databases for telemedicine applications.

[Pro25] **Optoelectronic mikrosystem to make research of samples about nano-liters volumes with using the optical capillaries,** (Mikrosystem optoelektroniczny do badania próbek o nanolitrowych objętościach z wykorzystaniem kapilar optycznych), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Jan Szmidt, co-worker: Paweł Wrzosek, October 2007 – October 2010

The main aim the project is to study the new, original method to make research of liquid samples about 10 – 9 liters volume, it means possibility of the analysis physics-chemical drop.

Final measurable work effect will be laboratory computer system to analysis chosen liquid parameters together with software to visualization of measuring results.

[Pro26] **Process of spontaneous emission in photonic crystals,** (Proces emisji spontanicznej w kryształach fotonicznych), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Paweł Szczępański, co-worker: Adam Rudziński, October 2008 – February 2011

The aim of this project is to develop an analytical model describing the process of spontaneous emission in structure of one-dimensional photonic crystal, that would account for parameters and defects of the structure, as well as spatial distribution of the active medium. The model will be based on quantum theory of interaction of light and matter, and the effective resonator model, used for the description of the photonic crystal's structure. Constructed model will allow to analyze many aspects of the phenomenon, but it could be also used as a tool for designers of modern optoelectronic devices, like distributed-feedback laser resonators, high efficiency light-emitting diodes or dielectric coatings.

[Pro27] **Structural camera 3D-HD** (Strukturalna kamera 3D-HD), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Piotr Garbat, co-worker: Marek Sutkowski, April 2010 – April 2012

Measurement is based on the active fringe projection method and HD-resolution video camera. This solution offers a much shorter measurement time in comparison with measurements using other standard techniques based on structural light methods.

[Pro28] **Technology and characterization of MIS structures with double gate dielectric stacks for non-volatile semiconductor memory (NVSM) applications** (Technologia i charakteryzacja struktur MIS z podwójną warstwą dielektryka bramkowego dla zastosowań w nieulotnych pamięciach półprzewodnikowych (NVSM)), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Robert Paweł Mroczynski, co-workers: Andrzej Jakubowski, Romuald Beck, Agnieszka Zaręba, Sławomir Szostak, Grzegorz Ghuszko, Jarosław Grabowski August 2009 – August 2012

The aim of this work is development technology of MIS structures with double gate dielectric stacks based on high-k dielectric layers (e.g. hafnium dioxide – HfO_2). The first objective of this project is to design a new set of photolithography masks with MIS/MISFET structures, allowing fabrication of semiconductor devices in self-aligned or non-self aligned technology. In the second part, MIS devices with different gate dielectric structures will be fabricated. The gate structure will consist of pedestal layer obtained by plasma enhanced chemical vapor deposition (PECVD) and high-k dielectric layer (fabricated by MOCVD, ALD, reactive sputtering) as top layer. In the third part of this work fabricated MIS devices will be fully characterized by means of electrical characterization (capacitance-voltage and current-voltage characteristics, charge pumping, CVS and CCS) and investigated from the viewpoint of non-volatile semiconductor memory (NVSM) applications. Significant part of this work will be also investigations of radiation damage influence onto electrical properties of MIS/MISFET devices with double gate dielectric stacks.

[Pro29] **The model of radiation generation in photonic crystal laser analysis,** (Model generacji promieniowania w laserach posiadających ośrodek aktywny w postaci kryształu fotonicznego), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Paweł Szczępański, co-worker: Marcin Koba, March 2010 – May 2011

This work introduces the model of light generation in two-dimensional photonic crystal laser. Although this work is limited to two-dimensional structures it remains general and conclusions apply to one- and three-dimensional cases. An approximate model of two-dimensional photonic crystal laser generation at threshold and above threshold has been show. This analysis is based on coupled mode theory and semiclassical theory. Additionally an energy theorem was used to obtain above threshold characteristics. Presented model takes into account nonlinear dispersion of active medium, gain saturation and mode competition effects. The outcome of calculations is valid for square and triangular lattice photonic crystals. On the basis of presented approximate model an output characteristics of laser operation has been shown. They describe output power in terms of a coupling coefficients and allow to define regions of coupling strength corresponding to

maximum power efficiency. Moreover the stability conditions and the characteristics for stable two mode operation has been shown.

- [Pro30] **The new optoelectronics method of intelligent classification of liquid bio-fuels properties with optical capillary use** (Nowa metoda optoelektroniczna inteligentnej klasyfikacji właściwości użytkowych biopaliw ciekłych z wykorzystaniem kapilar optycznych), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Michał Borecki, March 2009 – March 2012

The proposed microliter photonic sensor setup with local heating and optical capillaries offers a new approach to liquid examination using the index of refraction, turbidity, surface tension, viscosity and vapor pressure as the determining parameters, which can be correlated with biological or chemical information. The novelty of the proposed approach to sensor devices lies in the use of time-domain data and neural network processing, which gives more information about the liquid in question than the traditional static sample examination approach.

The principles of sensor operation will be described using examples of liquid fuels and bio-fuels. In this context, we discuss the relationship of the physically measured test-cycle data and the proper choice of features for the artificial neural network classification algorithm that we use. We intend to demonstrate that combined biological, chemical and physical analysis also leads to proper feature selection and sample classification.

- [Pro31] **Thin barium titanate layers for microelectronics demand – technology, characterization and applications**, (Warstwy tytanianu baru na potrzeby mikroelektroniki- technologia, charakteryzacja i próby aplikacji), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Jan Szmidt, co-worker: Piotr Firek, October 2008 – March 2010

The main goal of the project is development of the fabrication method of high-k and high-resistive BaTiO₃ thin films and investigation of its properties from the viewpoint of electronics applications.

Development of the fabrication technology (BaTiO₃ deposition, selective etching) will allow for producing of the test structures, like MIM, MIS capacitors, field-effect transistors (FETs) and ion sensitive field-effect transistors (ISFETs) with discussed layers as a gate insulator.

- [Pro32] **Tunable liquid crystal devices working on THz and GHz range**, (Przestrjalne ciekłokrystaliczne przetworniki na zakres THz i GHz.), Military University of Technology, Warsaw University of Technology, Polish Academy of Sciences, Wrocław University of Technology, Przemysłowe Centrum Optyki, project leader: Janusz Parka, co-workers: Bogdan Galwas, Marek Sutkowski, Piotr Gabrat, Agnieszka Szymańska, Jerzy Piotrowski, Krzysztof Madziar, December 2010 – December 2012

The main goal of the project is to develop and produce a tunable liquid crystal devices working in 5-100 GHz and 0,3-6 THz ranges. These devices with active area of few sq. centimeters can be applied as tunable phase shifters, phase correctors, modulators etc.

- [Pro33] **Unipolar devices and transistors for high-temperature electronics**, (Przyrządy unipolarne I struktury tranzystorowe na potrzeby elektroniki wysokotemperaturowej), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Jan Szmidt, co-worker: Mariusz Sochacki. May 2007 – April 2010

Schottky diodes and field effect transistors (MOSFET and JFET) for high-temperature electronics have been designed, developed, measured and characterized. The abovementioned structures have been tested within temperature range from 20°C up to 400°C.

- [Pro34] **Universal laser source for medical applications**, (Uniwersalne źródło promieniowania laserowego do zastosowań medycznych), Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Wojciech Kamiński, March 2009 – March 2012

The scientific aim of the project is to research all effects appearing in ion laser tubes, especially to find knew effects which are not known in literature. These effects could have significant influence on parameters of argon-krypton ion lasers which are developed and produced in Institute of Microelectronics and Optoelectronics. The analysis of discovered effects allows defining laser parameters important for medical application.

4.3. Projects Granted by International Institutions

- [Pro35] **Center of Nanophotonics** (Centrum nanofotoniki), EU structural project, project leader: Paweł Szczepański, co-worker: Ryszard Piramidowicz, 2009 – 2011

Project POIG. POIG.02.02.00-00-004/08 „Center of Nanophotonics” is realized in the scope of priority 2.2 of Operational Programme Innovative Economy by a consortium led by Institute of Electron Technology. Project is focused on development of a distributed competence center, having highest-level expertise and technical competences in the field

of nanophotonic materials and devices. Institute of Microelectronics and Optoelectronics is one of the main consortium's partners and is responsible for developing laboratory of infra-red spectroscopy oriented towards versatile optical characterization of nano-photonic materials.

- [Pro36] **Establishing of innovative, complementary laboratories dedicated to advanced research in micro-, nano- and optoelectronics**, (Utworzenie grupy innowacyjnych komplementarnych laboratoriów badawczych w obszarze mikro-, nano- i optoelektroniki), EU structural project, project leader: Paweł Szczepański, co-worker: Ryszard Piramidowicz, 2009 – 2011

Project POIG.02.01.00-14-138/08 „Establishing of innovative, complementary laboratories dedicated to advanced research in micro-, nano- and optoelectronics” is realized in the scope of priority 2.1 of Operational Programme Innovative Economy by Institute of Microelectronics and Optoelectronics and Institute of Electronic Systems.

The main aim of the Project is the development of a cluster of complementary laboratories, equipped with state-of-the-art research apparatus, offering high quality scientific services in the field of advanced electronic and photonic technologies. Investments of total value of 7 million EUR will complete R&D base of the laboratories, which shall result in establishment of a laboratory octagon, having at its disposal appropriate scientific expertise, as well as laboratory and prototyping base. State-of-the-art scientific infrastructure, being the primary result of the Project, shall enable more intense participation of IMiO and ISE research teams both in European projects, and large domestic projects involving industrial partners. It shall further allow enhancement of training actions necessary for education of market-demanded, high-quality specialists and professional improvement of employees of various industrial partners.

- [Pro37] **Future Internet Engineering**, (Inżynieria Internetu Przyszłości), EU Innovative Economy Programme, POIG.01.01.02-00-045/09, project leader: Paweł Szczepański, co-workers: Piotr Witoński, Paweł Gdula, Katrin Welikow, Krzysztof Anders, January 2010 – December 2012

The project covers the development and testing of infrastructure and services for the future generation Internet, i.e. IPv6 Internet and Future Internet. It is expected that new generations of Internet (one of the research priorities in the scope of European Union Framework Programmes) will contribute substantially to civilizational development in Europe by using their capabilities in all or almost all areas of human activity.

The aim of this project, in the scope of IPv6 Internet, is to develop a methodology for the evolutionary replacement of current version of IP (IPv4) in the national network by the IPv6 protocol and to propose new network solutions and services resulting from IPv6. The aim of this project, in the scope of Future Internet, is to develop and to test a proposal of a new architecture based on the resources virtualization along with new mechanisms and algorithms concerning the crucial aspects of network operations. The goal of the project is to create a national test network environment for the IPv6 Internet and Future Internet, enabling research and development activities based on the experimental verification.

- [Pro38] **IDESA – 2 „Implementation of widespread IC design skills in advanced deep submicron technologies at European Academia”**, (IDESA-2 “Rozpowszechnienie umiejętności projektowania submikronowych układów scalonych w europejskich wyższych uczelniach”), EU structural project, project leader: Wiesław Kuźmicz, September 2010 – August 2012

The goal of this project is to train the staff of European universities in design of integrated circuits to be implemented in state-of-the-art deep submicron technologies. Based on examples of practical designs a series of intensive 5-day hands-on courses have been prepared and are given at numerous sites throughout Europe. IMiO WUT staff members were among those preparing the courses and are active as lecturers.

- [Pro39] **Innovative technologies of multi-functional materials and structures for nanoelectronics, photonics, spintronics and sensors InTechFun**, (Innowacyjne technologie wielofunkcyjnych materiałów i struktur dla nanoelektroniki, fotoniki, spintroniki i technik sensorowych InTechFun), EU structural project, project leaders: Jan Szmidt, Wojciech Gwarek (The Institute of Radioelectronics WUT), project coordinator: Institute of Electron Technology, polish partners: Institute of Electron Technology, Institute of Physics Polish Academy of Science, Silesian University of Technology, Technical University of Lodz, Military University of Technology, 2009 – 2013

The main aim of this project is to integrate different semiconductors and technologies and develop new semiconductor devices based on creative and innovative technological solutions and designs. The project is focused on wide bandgap materials like zinc oxide and related films, gallium nitride and related epitaxial layers, silicon carbide. The functional thin layers for ohmic and rectifying contacts, interconnections, gate dielectrics and passivation have been developing based on four material groups: stable thermal oxides, nitrides, carbides and borides. The thin film technology includes fabrication and patterning of metallic, dielectric and epitaxial layers developed as separate and multi-purpose modules which could be integrated in full cycle of device fabrication at last stage of the project. Demonstrators of electronic and optoelectronic devices and sensors will be the final result of different materials integration.

Expected results

1. Design, fabrication, development and characterization of SiC MOSFET transistors.
2. Design, fabrication, development and characterization of HEMT AlGaN/GaN transistors on silicon substrate.
3. Design, fabrication, development and characterization of multi-parameter classifier of liquid bio-fuels quality.

- [Pro40] **Micro and nano-systems in chemistry and biomedical diagnostic - Task 2A: Capillary microfluidic sensors use in fertility diagnostics** (Mikro i nanosystemy w chemii i diagnostyce biomedycznej MNS-DIAG), EU structural project, project leader: Jan Szmidt, co-worker: Michał Borecki, February 2009 – September 2012

The aim of 2A task of grant is a construction of sensor that uses new method of optoelectronic diagnostics of woman

fertility. The sensor works using optical capillary in which the vaginal fluid is examined. Unlike the classical fiber optic sensors which rely on changes in light propagation inside the fiber as affected by outside conditions, the optical capillary sensors rely on changes of light transmission in capillaries filled with the analyzed liquid, which opens new interesting possibilities for the applications of those sensors, while raising specific issues relating to the construction, materials and technology of those sensors.

The construction and technological aspects of filling and positioning of the sample of the liquid into the capillary, capillary heating and optical signal coupling are under examination. The application aspects of mammals as cow and woman fertility diagnostics will be discussed, in particular sample pre-treatment and stage, reference points setting and signal processing.

- [Pro41] **Silicon-based nanstructures and naodevices for long-term nanoelectronics applications - NANOSIL, Network of Excellence within IST 7FP of UE,** (Przyrządy nano- oraz nanostruktury krzemowe dla zastosowań w nanoelektronice przyszłości), Sieć doskonałości w ramach 7-tego Programu Ramowego UE, project leader: Romuald Beck, co-workers: B.Majkusiak, L.Łukasiak, K.Dalbiak, W.Ciemiewski, R.Mroczyński, D.Tomaszewski, J. Gibki, J.Grabowski, G. Głuszko, A. Jakubowski, J. Jasinski, A. Mazurak, S. Szostak, J. Stęszewski, J. Walczak, January 2008 – December 2010

NANOSIL project is devoted to wide range of issues concerning silicon – based nanodevices. The main types of activities in which the Division actively participates within this project are:

- manufacturing of CMOS device based on classical approach, as well as on SOI, multigate or strained (SiGe) platforms, with particular attention to problems of mobility gain, leakage reduction, ... etc.;
- devices based on graphene on silicon;
- characterization of the manufactured test devices and diagnostics of problems that should be solved either by technology or device design modifications;
- modelling of all types of structures under investigation in this project.

- [Pro42] **Technology of new generation of hydrogen and hydrogen compounds sensor for over normative conditions applications POIG "DETEH,"** (Opracowanie technologii nowej generacji czujnika wodoru i jego związków do zastosowań w warunkach ponadnormatywnych), EU structural project, project leader: Jan Szmidt, co-workers: J.Kalenik, P.Firek, A.Werbowy, M.Śmiertana, July 2009 – June 2014

The main purpose of the project is the study on technology of new generation sensor of hydrogen and his compounds for over normative conditions applications e.g. high temperature, high pressure or aggressive environment. The research aims of the project are connected with carbon nanomaterials technology with Pd nanograins (in sensor active area) and investigations of connection between structure of sensor active layers and their reaction on hydrogen, hydrogen compounds presence.

4.4. Other Projects

- [Pro43] **Upgrade of vocational skills in field of application of ecological and effective energy solutions in Poland. Photovoltaic systems,** (Wspieranie kwalifikacji zawodowych w zakresie stosowania ekologicznych i efektywnych rozwiązań elektro-energetycznych w Polsce. Systemy fotowoltaiczne), National Fund for Environmental Protection and Water Management, Warsaw University of Technology, Institute of Microelectronics and Optoelectronics, project leader: Maciej Jużwik, co-workers: Piotr Knyps, Bartosz Fetliński, Ewa Piórecka, Jakub Wiśniewski, December 2010 –September 2012

Goal of the project is to improve vocational skills of people working in renewable energy and related sectors and increase awareness of progress in photovoltaic technologies among general public. To achieve this goal number (about 53) training seminars will be organized within given timeframe and in locations through Poland (there will be at least one training seminar in each voivodeship). Syllabus of each training seminar includes basics of photovoltaics effects, manufacturing technology of PV cells and modules, performance of different technologies in natural working conditions, practical guidelines for installers of grid-connected and autonomous systems as well as existing financial support mechanisms available for prospective investors in Poland. We estimate number of participants to reach 1600 at the end of project.

9. CONFERENCES, SEMINARS AND MEETINGS

9.1. Conferences

- [Con1] **10th Conference „Electron Technology” ELTE’2010**, Wrocław, Poland, September 22 – 25
participants: M.Bebłowska, R.B.Beck, T.Bieniek, M.Borecki, B.Fetliński, P.Firek, J.Grabowski, G.Głuszko, M.Iwanowicz, A.Jakubowski, J.Jasiński, M.Jużwik, J.Kalenik, M.Kalisz, P.Knyps, M.Kozłowski, K.Krogulski, J.Krupka, K.Król, L.Łukasiak, B.Majkusiak, A.Malinowski, M.Malinowski, A.Mazurak, M.Mroczkowski, R.Mroczynski, M.Sochacki, W.Strupiński, J.Szmidt, S.Szostak, D.Tomaszewski, J.Walczak, M.Wesołowski
- [Con2] **11th Scientific Conference Optoelectronic and Electronic Sensors COE**, Nałęczów, Poland, June 20 – 23
participants: M.Duk, T.Zyska, A.Kociubiński, M.Borecki
- [Con3] **13th IEEE Symposium on Design and Diagnostics of Electronic Circuits and Systems**, Vienna, Austria, April 14– 16
participants: J.Grądzki, T.Borejko, W.Pleskacz
- [Con4] **17th Int. Conference “Mixed Design of Integrated Circuits and Systems,” MIXDES 2010**, Wrocław, Poland, June 24 – 26
participant: A.Wielgus
- [Con5] **18th Int. Conference on Microwaves, Radar and Wireless Communications, MIKON-2010**, Vilnius, Lithuania, June 14 – 16
participant: J.Krupka
- [Con6] **2nd International Symposium on Advanced Plasma Science and its Applications for Nitrides and Nanomaterials, ISPlasma2010**, Nagoya, Japan, March 7 – 10
participants: A.Malinowski, A.Jakubowski, L.Łukasiak, D.Tomaszewski
- [Con7] **34th International Microelectronics and Packaging IMAPS-CPMT Poland Conference**, Wrocław, Poland, September 22 – 25
participants: M.Jakubowska, J.Kalenik, K.Kiełbasiński, R.Kisiel, K.Król, M.Sochacki, Z.Szczepański
- [Con8] **3rd International Conference on Plasma-Nanotechnology &Science, IC-PLANTS 2010**, Nagoya, Japan, March 11 – 12
participants: A.Malinowski, L.Łukasiak, A.Jakubowski, D.Tomaszewski
- [Con9] **5th Wide Bangap Materials – progress in synthesis and applicatons and 7th Diamond & Related Films jointly with 2nd Int. Workshop on Science and Applications of Nanoscale Diamond Materials**, Zakopane, Poland, June 28 – July 2
participants: R.B.Beck, P.Firek, G.Głuszko, A.Jakubowski, J.Jasiński, J.Kalenik, M.Kalisz K.Kiełbasiński, M.Kozłowski, K.Król, N.Kwietniewski, L.Łukasiak, R.Mroczynski, M.Sochacki, J.Stęszewski, W.Strupiński, J.Szmidt
- [Con10] **6th Int. Conference on Microwave Materials and their Applications, MMA’2010**, Warsaw, Poland, September 1 – 3
participants: M.Jakubowska, J.Krupka, N.Kwietniewski, J.Parka
- [Con11] **6th International Conference on Rare Earth Developompent and Application**, Beijing, China, August 2 – 6
participant: M.Malinowski
- [Con12] **Conference Capture, Transmission and Display of 3D Video, 3DTV-CON 2010**, Tampere, Finland, June 7 – 9
participants: P.Garbat, M.Sutkowski
- [Con13] **Excited States of Transition Elements, ESTE-2010 and Workshop on Luminescence**, Wrocław, Poland, September 11 – 15
participants: K.Anders, A.Jusza, R.Piramidowicz, M.Malinowski, M.Kaczkan,
- [Con14] **International Conference Ion Implantation and Other Applications of Ions and Electrons, ION’2010**, Kazimierz Dolny, Poland, June 14 – 17
participants: M.Sochacki, N.Kwietniewski, J.Szmidt
- [Con15] **International Conference the Advancement of Materials&Nanotechnology, ICAMN’2010**, Kuala Lumpur, Malaysia, November 29 – December 1
participant: J.Krupka
- [Con16] **Krajowa Konferencja Elektroniki KKE’2010**, Darłowo, Poland, May 30 – June 2
participants: P.Firek, G.Głuszko, J.Jasiński, M.Kalisz, R.Kisiel, K.Król, N.Kwietniewski, R.Mroczynski, M.Sochacki, J.Szmidt, Z.Szczepański

[Con17] **VI Sympozjum Naukowe Techniki Przetwarzania Obrazu**, Serock, Poland, November 18 – 20
participants: P.Garbat, T.Grudniewski, J.Parka, M.Sutkowski, A.Szymańska

[Con18] **X Conference Virtual University - model, tools, practice**, Warsaw, Poland, June 16 – 18
participant: B.Galwas, E.Piwowarska

9.2. Schools, Seminars and Meetings

[Con19] **10th International Workshop of Advanced Plasma Processing and Diagnostics**, Nagasaki, Japan, January 8 – 10
participants: A.Jakubowski, L.Łukasiak, A.Malinowski, D.Tomaszewski

[Con20] **16th Workshop on Dielectrics in Microelectronics**, Bratislava, Slovakia, June 28 – 30
participants: A.Mazurak, J.Walczak, B.Majkusiak

[Con21] **1st Ukrainian-French Seminar “Semiconductor-on-Insulator Materials, Devices and Circuits: Physics, Technology and Diagnostics” & 6th Int. SemOI Workshop “Nanoscaled Semiconductor-on-Insulator Materials, Sensors and Devices,”** Kyiv, Ukraine, April 26 – 30
participants: B.Majkusiak, A.Mazurak

[Con22] **2nd Polish-Korean Workshop on Information and Communication Technologies**, Warsaw, Poland, September 30
participants: B.Fetliński, M.Jużwik, M.Malinowski, L.Łukasiak, R.B.Beck

[Con23] **33rd Int. Spring Seminar on Electronics Technology, ISSE’2010**, Warsaw, Poland, May 12– 16
participants: A.Werbowy, R.Kisiel, Z.Szczepański, K.Król

[Con24] **57th Spring Meeting of Japanese Society of Applied Physics**, Kanagawa, Japan, March 17 – 20
participants: A.Malinowski, L.Łukasiak, A.Jakubowski, D.Tomaszewski

[Con25] **6th Workshop of the Thematic Networkon Silicon-On-Insulator Technology, Devices and Circuits, EUROSOI 2010**, Grenoble, France, January 25 – 27
participants: A.Mazurak, B.Majkusiak, J.Grabowski, R.B.Beck

[Con26] **8th European Workshop on Microelectronics Education**, Darmstadt, Germany, May 10– 12
participant: W.Kuźmicz

[Con27] **E-learning wyzwaniem dla nowoczesnej edukacji**, Warsaw, Poland
participant: B.Galwas

[Con28] **European Materials Research Society Spring Meeting (E-MRS)**, Strasburg, France, June 6 – 11
participant: M.Malinowski

[Con29] **European Optical Society – Topical Meeting on Diffractive Optics**, Koli, Finland, February 14 – 18
participants: M.Koba, P.Szczepański

[Con30] **JARA-FIT nanoelectronics days 2010**, Aachen, Germany, October 4 – 7
participants: B.Majkusiak, R.B.Beck, A.Mazurak, J.Grabowski

[Con31] **Third World Summit on the Knowledge Society**, Corfu, Greece, September 22 – 24
participants: B.Czejdo, M.Baszun

[Con32] **Warsaw Seminar "Advances in Web education**, Warsaw, Poland, February 25
participant: B.Galwas

[Con33] **XX International Travelling Summer School on Microwaves and Lightwaves**, Metz, France, July 3 – 9
participants: B.Galwas, P.Szczepański

10. AWARDS

- [Award1] Bogdan Galwas, **Ministry of Science and Higher Education Individual Award for Outstanding Lifetime Achievement of an Academic Teacher**, (Indywidualna Nagroda Ministra Nauki i Szkolnictwa Wyższego za całokształt dorobku wybitnego nauczyciela akademickiego)
- [Award2] Andrzej Jakubowski, Sławomir Szostak, Witold Pleskacz, **WUT Rector's Collective Award for Educational Achievements (first degree)**, (Nagroda Zespołowa I stopnia JM Rektora PW za osiągnięcia w dziedzinie edukacji)
- [Award3] Jerzy Krupka, et. al., **WUT Rector's Collective Award for Educational Achievements (team award, second degree)**, (Nagroda Zespołowa II stopnia JM Rektora PW za osiągnięcia dydaktyczne)
- [Award4] Katarzyna Ławniczak, **The prize in the competition “particularly valuable cooperation offers and presentations” in 4th Forum Science & Technology Days POLAND – EAST for “Integrated photonic devices for research institutes, small and medium-sized enterprises and large companies”** (Nagroda w konkursie „na szczególnie cenne oferty współpracy i prezentacje” na IV Forum Dni Nauki i Technologii Polska-Wschód za „Zintegrowane urządzenia fotoniczne dla instytutów badawczych, małych i średnich przedsiębiorstw oraz dużych firm”)
- [Award5] Józef Maciak, **Medal of National Education Commission** (Medal Komisji Edukacji Narodowej)
- [Award6] Michał Malinowski, Ryszard Piramidowicz, Marcin Kaczkan, Mariusz Klimczak, **WUT Rector's Collective Award for Scientific Achievements, (first degree)**, (Nagroda Zespołowa I stopnia JM Rektora PW za osiągnięcia naukowe)
- [Award7] Witold Pleskacz et. al., **1st Prize in EUROPRACTICE Design Contest - UMC 90 nm Technology**, (1. nagroda w konkursie EUROPRACTICE na najlepszy projekt układu scalonego w technologii UMC 90 nm)
- [Award8] Jan Szmidt, **Award Merit for Technical University of Lodz**, (Odznaka: Zasłużony dla Politechniki Łódzkiej)
- [Award9] Jan Szmidt, **Gold Medal of The Polish Business Club for “research and teaching achievements, particularly for fundamental studies of materials for nanoteleinformatics,”** (Medal Złoty Kapituły Akademii Polskiego Sukcesu: za wybitne osiągnięcia naukowe i dydaktyczne, w szczególności za fundamentalne badania materiałów na potrzeby nanoteleinformatyki)
- [Award10] Jan Szmidt, **Special Award “For the special involvement and significant support to the development of the Science & Technology Days Poland-East Forum idea”**, 4th Forum Science & Technology Days POLAND – EAST, (Nagroda Specjalna za szczególne zaangażowanie i wkład w rozwój przedsięwzięcia - IV Forum Dni Nauki i Technologii Polska-Wschód)
- [Award11] Jan Szmidt, **Special Award ITMED 2010 “For the special involvement and significant support to the development of the ITMED Forum idea”** 4th International Forum Innovative Technologies for Medicine, (Nagroda Specjalna ITMED 2010 za “Specjalne zaangażowanie i istotne wsparcie w organizacji Forum ITMED”)
- [Award12] Jan Szmidt, Michał Borecki, Piotra Firek, Maria Beblowska, Maciej Szmidt, Tomasz Niemiec, Kaja Urbańska, **WUT Rector's Collective Award for Scientific Achievements, (first degree)**, (Nagroda Zespołowa I stopnia JM Rektora PW za osiągnięcia naukowe)
- [Award13] Mateusz Śmiertana, et. al., **Diploma International Warsaw Invention Show The Agepi Award by Republic of Molgova State Agency on Intellectual Property**, (Diplom Warszawskiej Wystawy Innowacji)
- [Award14] Mateusz Śmiertana, et. al., **Gold Medal Diploma IV International Warsaw Invention Show IWIS 2010 by Association of Polish Inventors and Rationalizers**, (Złoty Medal IV Międzynarodowej Warszawskiej Wystawy Innowacji przyznany przez Stowarzyszenie Polskich Wynalazców i Racjonalizatorów)
